PROJECT CHANGE

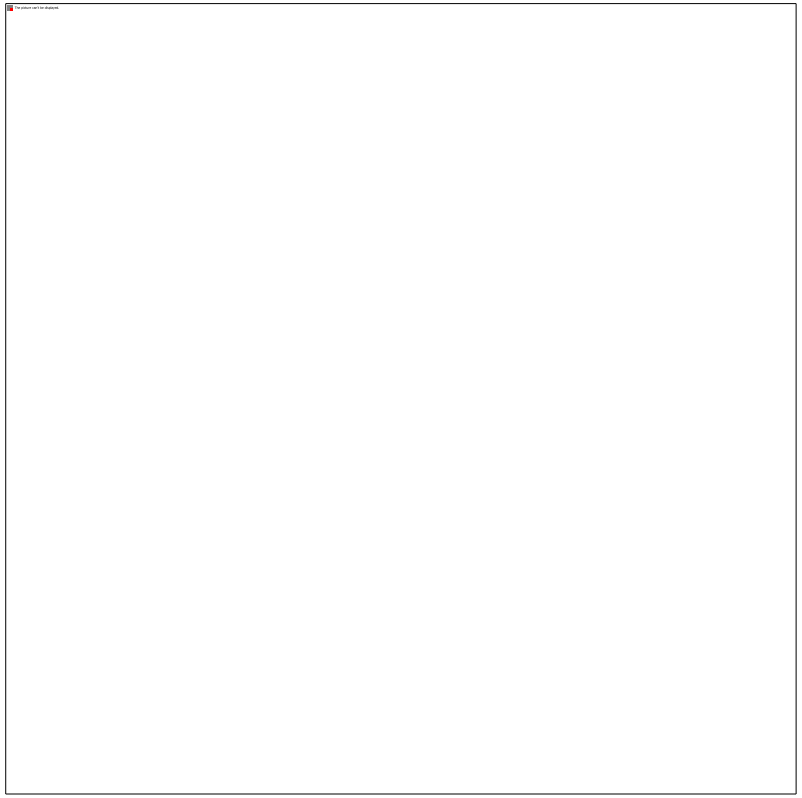
Project Evolution: TradeMySkills -> SoundTrade

- Initial idea: TradeMySkills(general skill trading)

- Problem:
- Too broad

- Decision:
- Narrowed focus to music skills only

- Result:
- Clearer scope
- Better MVP



LIVE DEMO

THE WHY???

We wanted to solve the problem of people not having a simple way to exchange music skills

THE WHAT

Our MVP focuses on core functionality to allow users to connect and trade individual music skills.

- MVP(THEWHAT):
- User login/signup
- Post a skill
- Search/Match skills
- Messaging

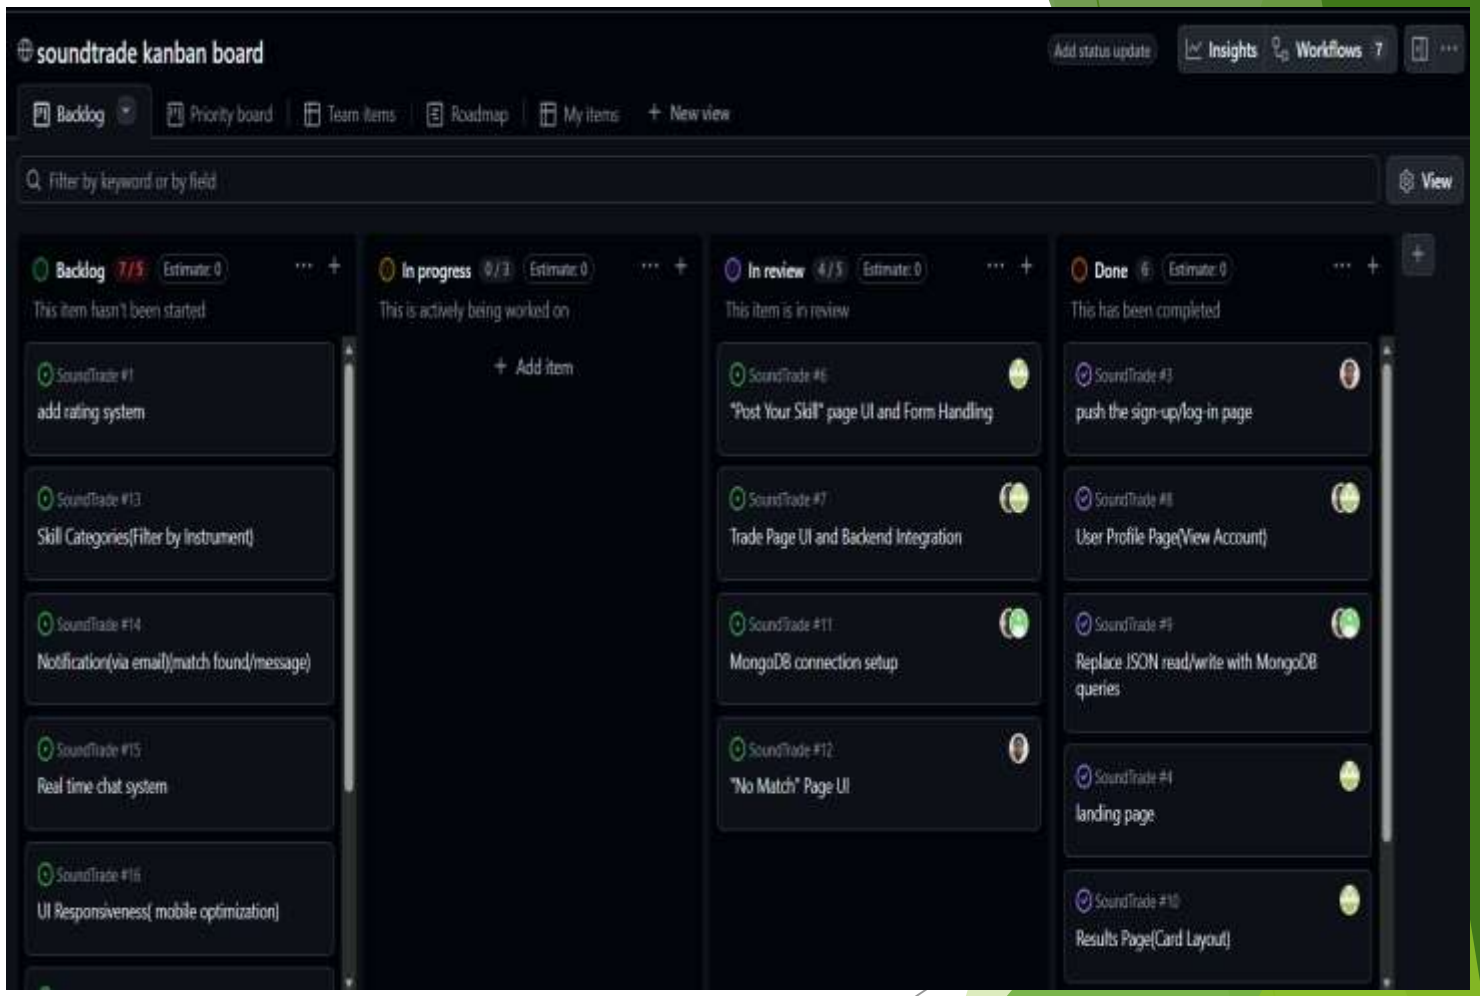
THE WHO

Our main users are musicians who want to either learn or teach skills

- OUR USERS WILL BE:
- Beginner musicians
- Intermediate/advanced musicians
- Learners and teachers
- Etc…

OUR MVP

- Our MVP is a usable system that allows users to post and match skills, even though advanced features are not yet implemented.
- OUR MVP IS:
- Smallest usable version
- Focused on Key user interaction
- Not fully complete system



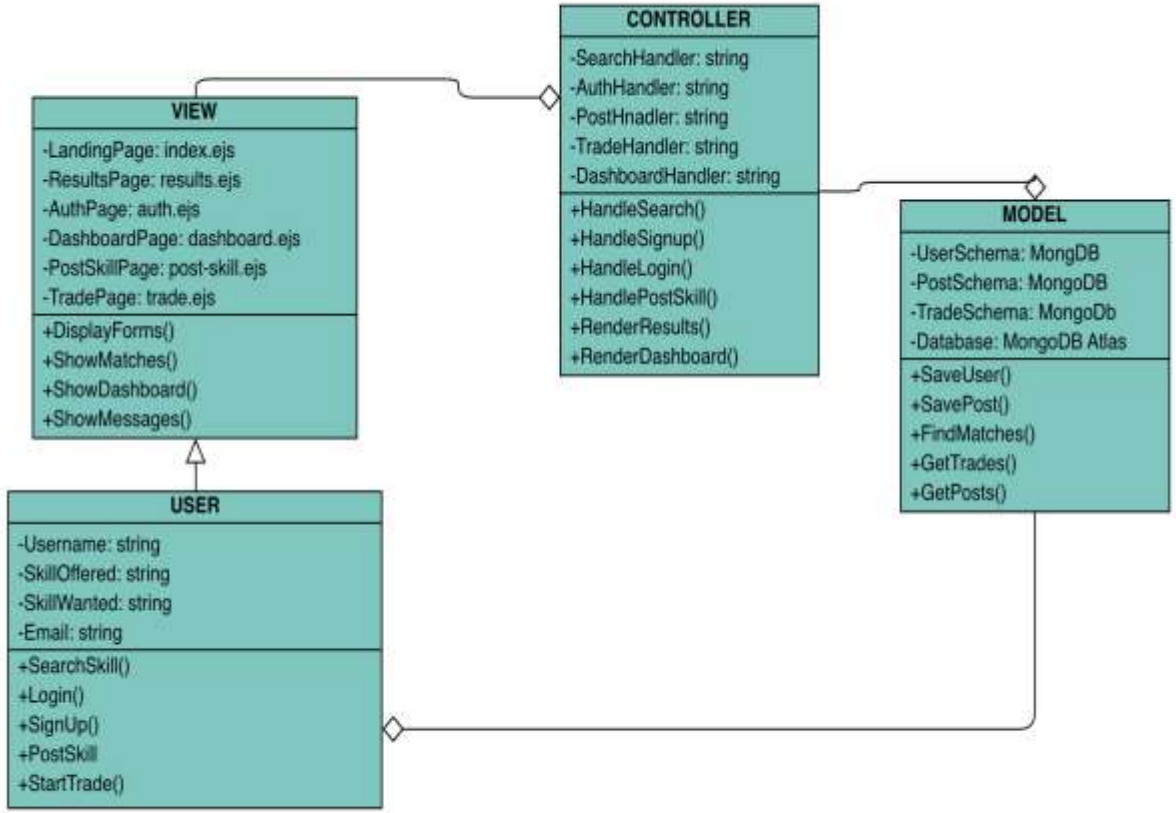
GITHUB KANBAN BOARD

- We used a Kanban board to track progress and ensure tasks were completed efficiently.

USER STORIES/REQUIREMENTS

These user stories guided our development and MVP decisions.

- EXAMPLE OF USER STORIES(OUR THOUGHT PROCESS):
- “As a user, I want to post a skill…”
- “As a user, I want to find matches…”



DESIGN/ARCHITECTURE

- We used the MVC architecture to separate concerns and organize our application.

- SoundTrades MVC:
- Model- MongoDB(Database)
- View – EJS(Frontend UI)
- Controller – Node.js + Express

CHALLENGES(HILLS AND VALLEYS)

We faced several challenges, especially with integration and collaboration.

- SOME CHALLENGES FACESD INCLUDE:
- Git conflicts
- Bad team co-ordination
- Backend integration
- User interface issues

FEEDBACK

- We received feedback that our original idea was too broad and lacked focus. Based on this, we narrowed our project to SoundTrade, focusing specifically on music skills.

- FEEDBACK RECEIVED:
- Old project scope was too broad
- Needed clearer target users
- MVP features neded to be simplified

- CHANGES MADE:
- Refined project to SoundTrade(music-focused)
- Reduces scope to focus on core features
- Prioritized essential MVP functionality

WHAT WORKED WELL??

- We have a functional MVP
- A clean UI
- All core features are working

WHAT COULD BE BETTER??

- We could have more features
- A better UI
- A stronger matching system
- Etc…

REFLECTION

This project helped us grow, both technically and as a team.
