BUSINESS CASE	
Proposed Project	SoundTrade – A Music Skill Exchange Platform
Date Produced	April 1, 2026
Background	Learning music skills has become more accessible through online resources, but many learners still struggle due to lack of interaction, guidance, and personalization. Tutorials and courses often do not provide real-time collaboration or feedback, which makes it difficult for users to stay engaged and improve effectively.
Business Need/ Opportunity	This project creates an opportunity to build a music-focused skill exchange platform where users can both teach and learn. Instead of relying on one-way learning (videos or courses), SoundTrade enables users to connect with others, match based on skills, and collaborate directly.
Options	ONLY OPTION – Develop SoundTrade Build a web-based platform focused specifically on **music skill exchange**. Users will: • List skills they can teach (e.g., guitar, piano, production) • List skills they want to learn • Get matched with other users • Communicate through a messaging system
Cost-Benefit Analysis	
DEVELOP SOUNDTRADE	
COST 1. Time and effort required from the development team 2. Learning new technologies during development 3. Limited features due to academic timeline 4. Risk of technical issues or delays	
Recommendation
